(57) Abstract:

NEW MATERIAL: A blood coagulation factor derivative (composed of a polyalkylene glycol having a molecular weight of 200W20,000, containing optionally an alkyl or alkanoyl group as a substituent group and bonded through a coupling agent to the amino acid side chain of a blood coagulation factor).

EXAMPLE: Monomethyl ether polyethylene glycol-4,6-dichloro-1,3,5-triazine-modified factor IX (PEG5000-IX-4.2mM).

USE: Blood coagulation promoting agent.

PREPARATION: The objective blood coagulation factor derivative can be prepared by bonding a polyalkylene glycol (e.g. polyethylene glycol) having a molecular weight of

200W20,000 and optionally containing an alkyl group or alkanoyl group as a substituent group through a coupling agent (e.g. cyanuric halide) to the amino acid side-chain of a blood coagulation factor.
